AUTO TONER FULFILLMENT SYSTEM

We Make Printing Easy.

Introducing a simple way to supply your network printers: The Auto Toner Fulfillment System.

You're busy as it is. Why should you have to worry about your printers running out of toner, what inventory you have on site and what you need to order from one or multiple suppliers?

Through a simple 3-step process, we ship you toner just when you need, where you need it.

UI's Auto Toner Fulfillment System analyzes data and considers various elements before processing an order for toner:

- › Evaluation of device usage over various periods of time
- › Review device data including page coverage, percent toner remaining, cartridge yields, etc.
- › Compile data through exclusive algorithms to determine number of remaining days of toner

1

We install our UI DCA (Data Collection Agent) at your site.

2

With the support of our I.T. Division we setup your account and enter printer device ID's for shipping your supplies.

3

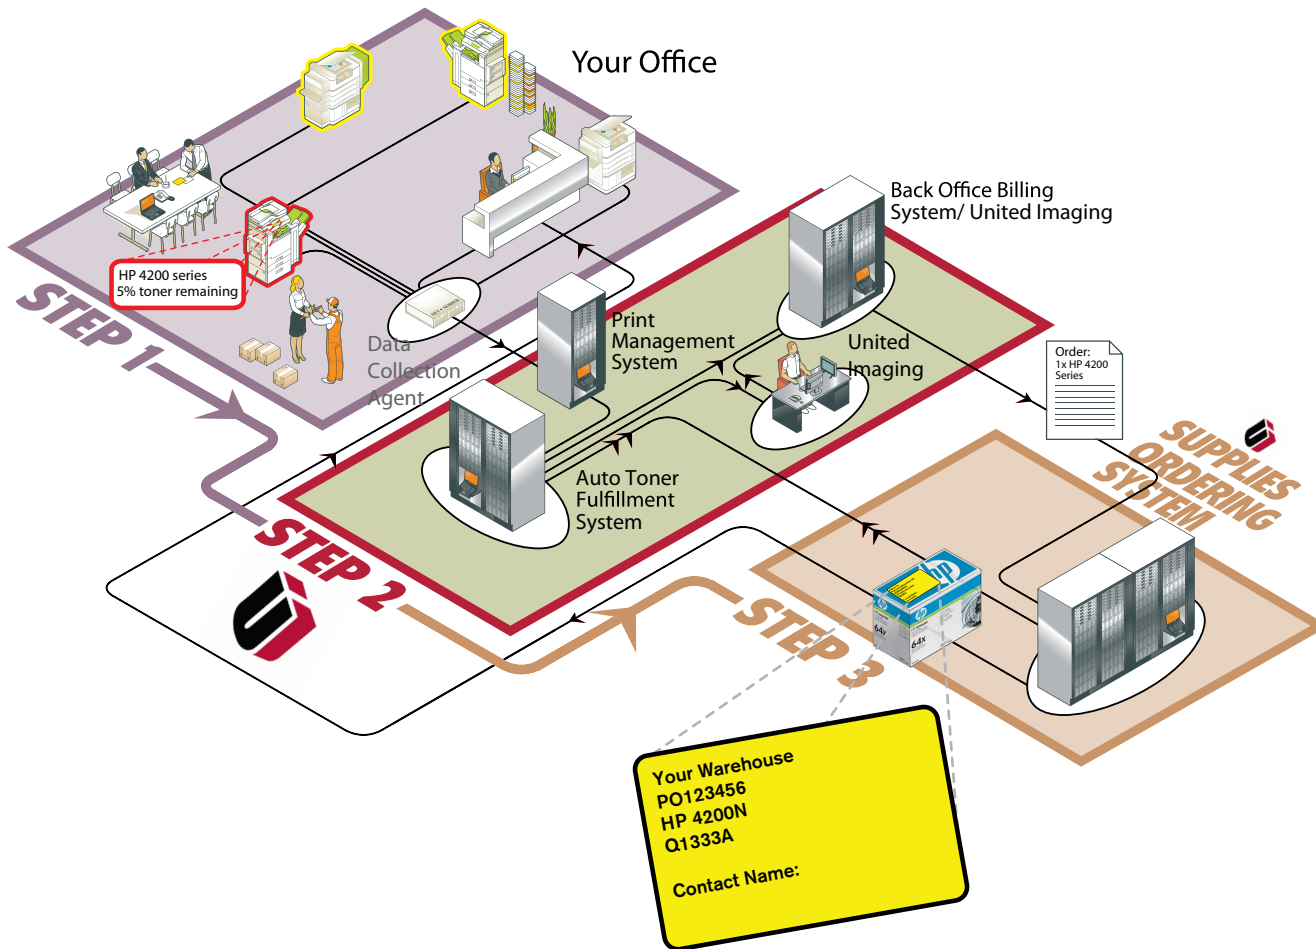

The Auto Toner Fulfillment System begins tracking device supply status and ships your toner!

With our Auto Supply Routing Labels, supplies are individually labeled with a device name, department and contact name, and delivered directly to the theWarehouse for distribution

Auto Toner Fulfillment System® Workflow

Data Collection Agent

The DCA uses one-way communication. Only device data such as page counts and status are stored. No personal or user data is recorded. Because the DCA does not collect, house or transmit any information regarding the content of print jobs, ATFS has no impact on compliance with the Health Insurance Portability and Accountability Act (HIPAA).

Three simple steps to complete consumable automation.
