On an average day,
over 200 fires occur
in U.S. workplaces.*

The cost of a workplace fire can be devastating. From equipment damage, employee absence, lost data and productivity, fires take their toll on businesses.

Fire safety pays! Keeping businesses prepared and people protected is a smart investment. In addition, NFPA and OSHA standards require workplace fire prevention plans and readily-available fire protection equipment.

Look to our selection of fire safety products and first aid supplies that meet safety standards and deliver dependability.

*OSHA

Make fire safety
your business

94% of the time a portable fire extinguisher is used it puts out the fire—typically within the initial two minutes.*

Did you know?

The word 'P-A-S-S' can help you to use an extinguisher: PULL the pin; AIM at the base of the fire; SQUEEZE the lever; SWEEP from side to side.

Extinguishers are UL classified by the type of fire they extinguish:

- A for common combustibles
- B for flammable liquids
- C for live electrical equipment

Per NFPA and OSHA, portable extinguishers must be mounted, identified and **readily accessible**.

Don't forget - extinguishers should be inspected monthly for pressure levels, dents, leaks or other signs of damage.

*NFIRS

Working smoke **alarms** can double your chance of surviving in a fire.*

Did you know?

The National Fire Protection Association recommends **testing** smoke alarms at least once a month.

You should **replace** each smoke alarm battery at least once a year and the entire alarm every ten years.

Combination alarms offer **2x the protection**— alerting you if there's smoke or a carbon monoxide leak.

Avoid placing alarms near drafts created by fans or air ducts—**moving air** can blow smoke away from the sensor.

*FEMA

Work-related fires and explosions account for more than 5,000 burn injuries each year.*

Emergency First Aid Guide

We offer a wide variety of first aid supplies plus kit refills

Did you know?

OSHA requires workplaces to have adequate first aid supplies readily available and adhere to ANSI standards for first aid kit contents.

ANSI revised standards for first aid kits:

Class A contains contents for more common types of injuries.

Class B offers a broader, larger quantity for more complex environments.

Types I, II, III and IV - based on usage. Look for labeling to reflect these standards.

*OSHA

Be prepared with critical supplies

Whether for fire emergencies or everyday needs, first aid products keep your business compliant and your employees safe.

Meet ANSI standards and OSHA requirements with first aid kits that keep supplies accessible and in place. We offer a broad selection for every size business plus refill items.

ANSI 2015 Compliant Class A Type I & II First Aid Kit for 25 People, 89 Pieces

ANSI 2015 SmartCompliance First Aid Station for 50 People, 202 Pieces

ANSI 2015 Compliant Industrial First Aid Kit for 200 People, 1659 Pieces

Don't forget - regularly assess your first aid kits to check expiration dates and refill and replenish supplies.

Be Fire Smart. Work Fire Safe.

From early warning to first line defense, the right fire safety products provide protection for you and your workplace. Choose **extinguishers, alarms, security mirrors** and more.

Don't forget - check your equipment!
Improper maintenance is the biggest reason detectors and extinguishers fail.

Commit to Fire Safety!

- ✓ Test alarms and replace batteries
- ✓ Refill and replenish first aid kits
- ✓ Replace worn out or damaged extinguishers
- ✓ Check expiration dates of first aid supplies
