

## BLOCK ALL VIRUSES, BOTH OLD AND NEW

Protecting your system against viruses is like dealing with a moving target. Once an antivirus program knows how to block known malware, suddenly a new, unknown threat appears to potentially infect your workstations and servers.

The Managed Antivirus capabilities in **UI MSP Remote Monitoring & Management (MSP RMM)** can help your system proactively stay ahead of all malware threats, both known and emerging. Managed Antivirus not only keeps your network's security up-to-date with protection against the latest known threats by using traditional signature-based protection, but it also protects against new viruses by using sophisticated exploratory checks and behavioral scans of your system.

## BLOCK ALL MALWARE, BOTH KNOWN AND EMERGING

- **Signature-based scanning** – Extensive, signature-based threat detection works to block all known threats.
- **Heuristic checks** – Protect against previously unknown threats using heuristic checks, which detect unrecognized viruses in a sandbox environment away from a business's core systems.
- **Continuous, real-time monitoring** – Ongoing scans of your system help detect programs that perform behaviors and actions commonly associated with malware exploits.

## MINIMIZE RESOURCES NEEDED FOR THREAT PREVENTION

- **Lightweight scans** – By reducing the size of scans, system resources can maintain high performance levels.

- **More accurate scanning** – Scans that are more precise will reduce the number of false positives.
- **Scheduling options** – Schedule deep scans for off-hours so you don't disrupt employees during important productive hours.

## CONTROL MORE OF YOUR VIRUS PROTECTION

- **Default policies** – Save time by using our default policies for servers, desktops and laptops.
- **Customization** – Create your own policies by modifying factors such as quarantine rules, exclusion settings and definition update schedules.
- **Better control** – Depending on your system needs, you can pause or cancel scans.
- **Easy rollout** – Deploy Managed Antivirus in bulk across sites, servers and workstations.
- **Endpoint branding** – Set up your Managed Antivirus instance to include your company name, website and support details.
